

SURVEY OF INDIA

LEVELLING OF PRECISION IN INDIA

HEIGHTS OF BENCH MARKS

IN 1/MILLION SHEET

No. 40 (HYDERABAD, SIND)

CORRECTED TO 1934

LATITUDE	24°-28° N.
LONGITUDE	68°-72° E.

PUBLISHED BY ORDER OF
BRIGADIER H. J. COUCHMAN, D.S.O., M.C.,
SURVEYOR GENERAL OF INDIA.

PRINTED AT THE GEODETIC BRANCH OFFICE,
SURVEY OF INDIA, DEHRA DŪN, 1934.

Price Two Rupees or Three Shillings and Six Pence.

INTRODUCTION

Between 1858 and 1909 the Survey of India completed a system of lines of levelling known as the first levelling net. In 1909 the closing errors of the various circuits were distributed by a simultaneous adjustment, by which all discrepancies were removed and the whole net work was brought into terms of the Mean Sea-Level at nine tidal observatories on the coasts of India. The lines which entered into this adjustment are known as Main-lines and are numbered from 1 to 86. Certain other lines which were observed with similar accuracy, but which did not enter into the simultaneous adjustment are known as Branch-lines, and are designated by numbers and letters, e.g. 61 F. The branch-lines have been adjusted on to the main-lines with which they are connected. All the lines of the first level net, and a few lines observed between 1909 and 1921, were observed on the system known as "Simultaneous Double Levelling of Precision", in which two levellers work together, the second following a short distance behind the first.

The second levelling net was begun in 1914. In general its lines do not follow those of the first net, but intersect them and fill the gaps between them. It is being observed in accordance with the International Standard of "High Precision", in which the line is observed by two independent levellers, working in opposite directions. The accuracy of these lines is expected to be rather greater than that of the first net, but not so much so that the former can be considered at all obsolete. To avoid the confusion which would result from giving inconsistent values to closely adjacent bench marks, the lines of the new net are being adjusted to those of the old net, between all common points. In about 1950 when the second net will be completed, a second adjustment will be made, but it is unlikely that the adjusted values will differ seriously from those now being published, and it is probable that, except for scientific purposes, the values now given will be retained indefinitely. The main-lines of the second net have been given serial numbers, commencing at 101. In a few cases in which the lines had been observed before the arrangement of the second net had been finally decided, numbers were allotted as for branch-lines of the first net, e.g. 57 E.

The levelling referred to above is known as primary levelling. In addition, many lines of secondary precision are also being observed, generally in connection with engineering works. The system is similar to that of the old "Simultaneous Double Levelling of Precision" with very slightly relaxed standards, and the work may be considered to contain no errors of significance to engineers. This is called "Secondary levelling of Precision". Secondary lines are included in this series of pamphlets when they are of general interest: if they are of local interest only, as for example, a close net-work in connection with some engineering project, they are published in separate pamphlets. Their existence (if any) is indicated on the chart at the end of this pamphlet. They receive numbers as for branch-lines, e.g. 40 A, and are adjusted on to the primary lines.

A close net-work of tertiary levelling of lower accuracy has been carried out in some areas where required for special purposes. The data are not published, but can be obtained by special application. The existence of such work (if any) is indicated on the chart at the end of this pamphlet.

The chart at the beginning of this pamphlet shows the lines of the first net, the completed and projected lines of the second net, and the secondary lines of general interest which are to be included in this series of pamphlets.

Each pamphlet of this series contains the data of an area covering 4 degrees of latitude and 4 degrees of longitude, and is known by a number, and the name of the principal town in the area, e.g. Sheet No. 44 (Lahore). Internally each pamphlet is divided into 16 degree squares, corresponding to the degree sheets of the $\frac{1}{4}$ -inch map. The degree sheets are lettered from A to P as shown on the chart at the end of the pamphlet, and are known by the combined number and letter, e.g. 44 E. The bench marks have been numbered according to the degree sheets in which they fall, the numbering in each sheet being quite independent of that in the surrounding sheets. Consequently, when a line passes from one degree sheet to another, the consecutive numbering of the bench marks on the line is broken. To indicate a particular bench mark, therefore, it is necessary to give its number and the degree sheet in which it falls, e.g. bench mark number 85 in degree sheet 53 B, written B.M. 85/53 B. In the body of pamphlet the full designation of each bench mark has been replaced by its serial number only: thus in the list of bench marks falling in degree sheet 53 B the number 85 indicates B.M. 85/53 B. A number once having been allotted to a bench mark will never be changed, unless the bench mark is disturbed: if on releveling it is found to have been disturbed, its old height and number are cancelled, and a new height and number allotted. It will be remarked that the numbers of bench marks are not always consecutive; the reason is that a certain number of bench marks which appear in G. T. S. Vols. XIX A and XIX B and the first editions of this pamphlet have subsequently been disturbed or destroyed, and are, therefore, omitted from this publication, while a number of bench marks, not occurring in the previous editions, have since been fixed by revisionary or new levelling, and are included in it.

When a line is re-observed the levels of some of the bench marks are found to be altered. A bench mark thus altered loses its identity considered as a datum of height. A new number is accordingly assigned to it, but for convenience the old number is written below in italics between brackets, e.g. 71, 72, 73. When this double numbering is met with, ^{(20) (21) (22)} it is an indication that the height of the bench mark has changed from its original value, although it may appear to be intact.

A certain number of the bench marks (about 2,000 in all India) have been selected for permanent preservation at the expense of the Survey of India. They are known as Primary Protected Bench marks (P.P.B.M.) and are designated by the letter (PP) after or below their serial numbers. The Survey of India is always ready to receive reports of the condition of all bench marks, and to record their destruction in later editions of these pamphlets, but the upkeep of all except the PP B.M. lies in the hands of local authorities.

In the chart at the end of this pamphlet the lines of levelling are shown in green. Additional heights in the sheet, determined trigonometrically, are shown thus: \triangle_{1570} . They are merely meant to show the general lie of the country. If further information is required about them it will be found in the Triangulation pamphlet of the degree sheet in which they fall. It is not possible to enter all the bench marks in the chart: only selected ones are shown, including all Primary Protected Bench marks, and terminal bench marks where a line crosses into another sheet.

When fresh levelling is carried out it is published in the form of addenda to these pamphlets. The addenda are incorporated in the main pamphlets as soon as new editions provide opportunities.

The bench marks ordinarily used are of seven classes: Standard (2 kinds), Interred (2 kinds), Rock-cut (protected), Embedded, and Inscribed.

Standard Bench marks (Major and Minor Types): Standard bench marks are only erected in important towns where arrangements for their preservation can be made

The lines of levelling dealt with in this Pamphlet, with the dates of their execution, are given below:—

1. Main-Line 53 (Shikārpur to Tatta) ... Observed in 1858-59-60.
Portion between Shikārpur and Sehwan is not revised; along the *kachcha* road and cross country via Jalbāni to Sehwan.
2. Main-Line 54 (Shikārpur to Murghai) ... Observed in 1858-59.
Partly along the cross country and partly along the road via Kashmor.

3. Main-Line 101 (Karāchi to Khānpur) ... Observed in { 1920-21.
1921-22-23.
1924-25-26.

Section Karāchi-Kotri: comprises old lines 43 and 53 originally observed in 1859-60 and 1893-94, and 1858-59 severally, revised in 1924-25-26: along the road via Tatta and Jerruck.

Section Hyderabad & Kotri-Jacobābād: comprises part of old line 53 originally observed in 1858-59-60, revised in 1920-21: partly along railway line, road and partly along cross country, via Sehwan, Ohini, Mehar, Kambar and Ghaili Dero to Jacobābād. It includes check-levelling between Hyderabad and Kotri. Section Jacobābād-Khānpur: comprises parts of old lines 54 A, 52 and 57 C originally observed in 1910-11 & 1913-14, 1904-05-06 and 1909-10 severally, revised in 1921-22-23: along the railway line via Shikārpur, Rohri and Rahim-yār Khān to Khānpur.

4. Branch-Line 101 A (Sukkur to Hyderabad) ... Observed in { 1924-25.
1927-28-29.

It is coincident with part of Main-Line 52 (Sujāwal to Shikārpur) observed in 1901-03-06; Section Sukkur-Bāndhi revised in 1924-25 and 1927-28 and Section Bāndhi-Hyderabad in 1927-28-29: along the railway line via Rohri, Khairpur, Bāndhi, Nawābshāh and Oderolal.

- N.B. This line was originally intended to be included in the new level net and therefore observed by the method of High Precision levelling, but owing to the wide discrepancies between old and new levelling and the discordant results obtained by different levellers, it has been excluded from the new level net and is now considered as secondary levelling.

5. Main-Line 52 (Sujāwal to Shikārpur) ... Observed in 1904-05-06.
Portion between Sujāwal and Hyderabad is not revised; along the road up to Tando Muhammad Khān and thence along the railway line to Hyderabad.
6. Main-Line 150 (Kotri to Barmer) ... Observed in 1924-25-26.
Along the railway line via Mīnpur Khās, Chhor and Gadra Road.

7. Main-Line 44 (Navānar to Sujāwal) ... Observed in 1889-90.
Along the road via Moghal Bhin (see line 104 below).
The portion between Bahar and Nakhtarāna Mota is not revised owing to flood area.

8. Main-Line 104 (Virangām to Tatta) ... Observed in { 1921-22.
1923-24.
1926-27-28.

Section Virangām-Nakhtarāna Mota: comprises old lines (49, 48), (47, 46) and 14 originally observed in 1875-76, 1874-75 and 1889-90 severally, revised in

1921-22 and 1923-24; along the railway line to Wadhwan; thence along the road via Rajkot, Jodiya, Shikarpur, Anjar, Mundra and Bhuj to Nakhtarana Mota. Section Buhar-Tatta: comprises old lines 44 and 45 originally observed in 1889-90, revised in 1926-27-28; along the road via Sujawal.

N.B. The portion between Nakhtarana Mota and Buhar has not yet been revised.

9. Main-Line 102 (Khānpur to Mārwar Pāli) .. Observed in 1921-22 & 1923-24. Along the foot-path via Islāmābād to Jaisalmer; thence along cart road via Sheo to Barmer and thence along the railway line via Luni Junction to Pāli.

Any person who discovers that a Survey bench mark has been disturbed, or that a description given in this book is no longer correct, is requested to inform the Director of the Geodetic Branch, Survey of India, Dehra Dun.

Bench marks falling in Degree Sheet 40 A

Number in Sheet 40 A	Distance from preceding F.M., unless otherwise stated	Description of Bench marks	Height above Mean Sea-Level
	miles	Main-Line 53 (Shikarpur to Tatta) [Section Shikarpur-Sehwan not revised in 1921-23 in Main-Line 101].	feet
85* FF	12.77	On ground level mark-stone of Jalbāni G. T. Survey Tower Station, lat. $27^{\circ} 40' 6'' \cdot 09$, long. $68^{\circ} 18' 59'' \cdot 05$. This is a geodetic station of the Great Indus series and is situated in the Rathe Dera <i>kārdāri</i> , district Shikarpur, Upper Sind. The small village of Mohamed Khān, inhabited by a sect called Jalbāni, is distant only about 300 yards N. The pillar is perforated, and 40.36 feet in height above the mark-stone at ground level.	165.532
86* FF	11.53	On ground level mark-stone of Chāndia-Khān G. T. Survey Tower Station, lat. $27^{\circ} 42' 16'' \cdot 21$, long. $68^{\circ} 5' 31'' \cdot 50$. This is a geodetic station of the Great Indus series and is situated in the <i>laypa</i> of Mahin, <i>kārdāri</i> Kambar. The small village of Chāndia-Khān Doib is about 300 yards to the NE. The pillar is perforated, and 30.08 feet in height above the mark-stone at ground level.	155.121
		Main-Line 54 (Shikarpur to Murghai)	
283 (79)	0.00	Iron plug driven horizontally into N. wall of Shikarpur <i>kachakri</i> , see page 1.	193.649 8
87† FF	6.71	On upper mark-stone of Hatidara G. T. Survey Tower Station, lat. $27^{\circ} 59' 2'' \cdot 16$, long. $68^{\circ} 41' 55'' \cdot 65$. This is a geodetic station of the Great Indus series and is situated in the <i>kārdāri</i> and district of Shikarpur, Upper Sind, on a sand hill of that name, elevated about 15 or 16 feet above the level of the surrounding ground. The village of Khānpur is about $1\frac{1}{4}$ miles NW. The pillar is solid, and 19.3 feet high. It has a mark-stone on its upper surface.	234.540

‡ Revised value from the levelling of 1921-23.

* Reported not traceable or missing in 1925.

† Reported mark-stone not found in 1928.

472	0.09	C.T.S. O B.M. on bedrock in level with road, 99 feet N. of milestone Jerruck 0, Kotri 24, 213 feet W. of NW. corner of house of Sub-Inspector of Police, Jerruck. It is situated at the head of a <i>nala</i> flowing north. <i>Note: From this point emanates a branch-line to standard bench mark, Jerruck.</i>	84.167
473rr	0.30	Top of copper bolt (no inscription) fixed on top of concrete monolith of Standard Bench Mark (Minor Type) at Jerruck. (Primary mark). Situated on top of hillock $\frac{1}{4}$ mile SE. of Police Lines, Jerruck. The distances and bearings of the surrounding objects are: Top of hillock just above and N. of hospital on right bank of Indus river, about $\frac{1}{2}$ mile and 41° ; chimney of <i>dak</i> bungalow about $\frac{1}{4}$ mile and 93° ; centre of rifle range about $\frac{3}{4}$ mile and 292° ; E. knoll of long flat range of hill near milestone 15 from Kotri and 1 mile S. of Aungar village about 9 miles and 352° . Consists of a circular copper bolt $1\frac{1}{2}$ inches in diameter fixed on top of concrete monolith 1 foot square at base and 3 feet high, the upper 3 inches being moulded to the form of a frustum of a pyramid terminating in a smooth square of about 3-inch side. The monolith rests on a bed of concrete on rocky foundation 5 feet square and 3 feet deep, the upper surface of monolith being 1 foot above ground level. It is surrounded by a stone masonry wall 5 feet square (outside), 1 foot thick, and $2\frac{1}{2}$ feet high. It includes two supplementary marks, one on E. side of the monolith consisting of hard stone prism 8 inches long and 3 inches square, its smooth top flush with the surface of the concrete bed, and the other a stout round iron bolt of $\frac{3}{4}$ -inch diameter and 8 inches long built horizontally into the S. masonry wall and projecting about $1\frac{1}{2}$ inches out of it. The inner enclosure is filled in with rubble to a height of about 6 inches above the top surface of the monolith and the rest with earth. <i>Note: The foundation is on solid rock and the nearest road is about $\frac{1}{4}$ mile distant.</i>	150.198

	miles	Branch-Line 101 A (Sukkur to Hyderabad). [Section Bandhi-Hyderabad revised in 1927-28-29].	feet
33	0.52	G.T.S. on NE. cap of railway bridge No. 7 over Hyderabad-B.M. Gidu Bandar road, near telegraph post No. 110/20 from Karachi. (Revised description).	82.164 β
		Note: Branch-line (ii) ends here. (iii) Branch-line to Ganjo Takkar hill.	
416	1.08 [from B.M. 161]	B.O.M. on brick on NW. parapet, at its S. end, of railway culvert No. 17, opposite combined goods and trans-shipment office No. 87 of N. W. and Jodhpur rail-ways, about $\frac{1}{4}$ mile SW. of Hyderabad railway station, and about a furlong W. of mile-plate No. 113 from Karachi.	66.095 β
417	0.17	B.O.M. on stone at base at pavement of W. water-column about 5 feet W. of same, opposite railway tank No. 54, about 250 feet E. of mile-plate No. 113 from Karachi and about $1\frac{1}{2}$ furlongs S. of Hyderabad railway station.	65.749 β
418	0.73	B.O.M. on stone step, fourth from bottom, at S. side of water <i>piñā</i> bearing the inscription "Erected by Rai Bahādur Seth Mohandās Menghrāj" on S. side of Hyderabad-Badin road, about a furlong E. of milestone Hyderabad 1, Badin 61.	64.340 β
419	1.15	B.M. on stone military boundary pillar, embedded at extreme NW. corner of Ganjo Takkar hill 125 $\frac{1}{2}$ feet from SW. corner of Muhammad Khyree Kubba (Kubba Bibi Khabar), 123 $\frac{1}{2}$ feet W. of B.M. 152.	127.506 β
152pp	0.02	B.M. (Type C) on rock in situ on top of Ganjo Takkar hill, close to a graveyard with Muhammad Khyree Kubba (Kubba Bibi Khabar) and within military limits. It is 155 feet and bears 186° from W. corner of the Kubba and 35 feet and 233° from S. corner of mud wall surrounding the graveyard, and is protected by a hollow masonry pillar 2 feet square and 2 feet high bearing the inscription G.T. Survey B.O.M. the height of which above the bench Upper Mark mark is 1.679 feet.	128.461 β
		Note: Branch-line (iii) ends here.	

 β Old value found correct in 1927-28-29.

	<i>miles</i>	Main-Line 150 (Kotri to Barmer).	<i>feet</i>
464	1.28	on brick on NW. parapet of railway culvert No. 12, between telegraph posts Nos. 126.18 and 126/19 from Kuchāwan Road.	52.642
465	0.95	on stone slab let into E. abutment, at its N. side, of railway culvert No. 7, between telegraph posts Nos. 125.19 and 125.20 from Kuchāwan Road.	51.051

Bench marks falling in Degree Sheet 40 D

Number in Sheet 40 D	Distance from preceding B.M. unless otherwise stated	Description of Bench marks	Height above Mean Sea-Level
	miles	Main-Line 44 (Navanar to Sujawal). [Portion between Nakhtrana Mota-Buhar not revised in Line 104].	feet
1 FP	10.18 [from B.M. 16/41A]	On upper surface of circular pillar of Guni G.T. Survey Tower Station, lat. $24^{\circ} 2' 9'' \cdot 30$, long. $68^{\circ} 33' 2'' \cdot 82$. This is a Geodetic station of the Cutch Coast Series and stands in the Rann about 2 miles E. by N. of the <i>Dharm-sāla</i> at Guni village, $1\frac{1}{2}$ miles W. of the road between Sind and Cutch, 7 miles SSE. of the police post or <i>chauki</i> and <i>Dharm-sāla</i> at Vehr and 8 miles NW. of Bulji <i>chauki</i> . It is in <i>tāluka</i> Jāti, sub-division Shāhbandar, district Karāchi. The station consists of a tower of sun-dried bricks, enclosing a perforated pillar of masonry about 24 feet in height of which the upper 5 feet is circular and isolated: an arched aperture on the S. side gives access to the lower mark. When visited by the Levelling Party in 1889-90, the tower of sun-dried bricks had crumbled away, forming a mound of earth encircling the pillar to about half its height, the exposed portion of masonry was slightly eaten away by <i>kalar</i> , but the mark-stone in the upper surface of the pillar was found intact. Note: From this point emanates a branch-line to Sugandia T.S. (B.M. 16/41A).	29.905
2	7.23	G.T.S. Embedded a few inches below ground level at S.M. Vehr, in centre of E. side of <i>dharm-sāla</i> , about 2 feet from wall and 330 feet from tank. The <i>dharm-sāla</i> is situated in the Rann, 21 miles SE. of Mughalbhin. Note: From this point emanates a branch-line to Mod T.S.	5.606
3 FP*	4.52	On upper surface of circular pillar of Mod G.T. Survey Tower station, lat. $24^{\circ} 11' 46'' \cdot 92$, long. $68^{\circ} 31' 11'' \cdot 48$. This is a Geodetic station of the Cutch Coast Series and stands in a patch of land which had been under cultivation in the Rann, about $4\frac{1}{2}$ miles N. by E. of the police <i>chauki</i> and <i>dharm-sāla</i> at Vehr on the road between Sind and Cutch. It is in <i>tāluka</i> Jāti, sub-division Shāhbandar, district Karāchi. The station consists of a tower of sun-dried bricks enclosing a perforated pillar of masonry 25 feet in height of which the upper 5 feet is circular and isolated: an arched aperture	35.049

Bench marks falling in Degree Sheet 40 D

Number in Sheet 40 D	Distance from preceding B.M. unless otherwise stated	Description of Bench marks	Height above Mean Sea-Level
	miles	Main-Line 104 (Viramgam to Tatta). [Section Buhar-Tatta revised in 1926-27-28].	feet
116 (5)	0.85	G.T.S. B.M. on stone coping, at E. end, of S. parapet of Gādāp wāh bridge, 3 miles SE. by E. of Jāti on Lakhpat-Jāti road.	21.9108
119 PP	1.48	⊙ on lower or ground mark-stone of Moghul Bhin (Mughalbhin) G. T. Survey Tower Station, lat. 24° 21' 7"·66, long. 68° 17' 7"·49. This is a principal station of the Cutch Coast Series and is about a mile E. of the town from which it takes its name and a few hundred yards from the huts known as Khera-ka-wāla. It is in the lands of the village of Jhariro, tāluka Jāti, sub-division Shāh-bandar, district Karāchi. The station consists of a tower enclosing a perforated pillar of masonry 20 feet in height of which the upper 5 feet is circular and isolated. An arched aperture to its S. side gives access to the lower mark. When visited by the levelling party in 1927-28 the earthen tower had crumbled away forming a mound of earth, about 8 feet in height, encircling the pillar. The station was found in good order but the upper mark was missing. The directions and distances of the circumjacent villages are: Jāti W., miles 1½; Khamiso Khairo ENE., mile ¾; Mohāna WSW., miles 1½.	24.064
120	1.07	G.T.S. B.M. on brick at S. or front veranda of Mukhtiārkar's office, Jāti, about 51 feet from SE. corner of E. wall, just below window north of the door to his office and 1 foot 4 inches from the S. wall of the main building.	18.707
121	0.11	G.T.S. B.M. on brick fixed in SE. veranda of dispensary at Jāti, just below western of the two windows and opposite to the latticed door.	18.154
122	1.64	G.T.S. B.M. on brick at middle of NE. parapet of culvert over Chandan Nawāb wāh about 3½ furlongs SE. of milestone Jāti 2, Sujāwal 20 on Jāti-Sujāwal road.	20.902
123	1.20	B.O.M. on brick at centre of E. parapet of culvert about 1½ furlongs S. of milestone Jāti 3, Sujāwal 19, on Jāti-Sujāwal road.	18.704

8 Revised value from the levelling of 1926-27-28.

202	1-67	<p>at Chhor railway station. Intersected 243 feet N. of station building and 3 feet below ground level. The distances and bearings of the surrounding objects are: NE. corner of station building 258 feet and 163°; NW. corner of same 250 feet and 175°; NW. corner of masonry water-tank 128 feet and 117°; centre of main-line rails 200 feet S. A rail-post with an iron plate bearing letters 1-67 stands 4 feet N. of the bench mark.</p> <p><i>Note</i>—The foundation is in front of the nearest railway fence at 165 feet distant.</p> <p><i>Note</i>—From this point an water main-line to Standard Bench Mark, Chhor.</p>	17-681
203	0-15	<p>Top of stone monolith (no inscription) of Standard Bench Mark (Minor Type) at Chhor railway station. (Primary Mark). It is situated about a quarter mile N. of Chhor railway station building outside the NW. corner of the station yard wire-fencing. It bears 1213 feet and 163° and 1213 feet and 165° respectively from NE. and NW. corners of station building; NW. corner of station yard N. wire-fencing 51 feet and 171°; W. water column 1180 feet and 185°. The station consists of a sandstone monolith, 1 foot square at base and 3 feet high, the upper 3 inches being dressed to the form of a frustum of a pyramid terminating in a smooth square of 3-inch side. The monolith rests on a bed of concrete 5 feet square and 3 feet deep, the upper surface of the monolith being 1 foot above ground level. It is surrounded by a masonry wall about 5 feet square (outside), 1 foot thick and 24 feet high. It includes two supplementary marks one of which is on W. side of the monolith consisting of a copper bolt of 1½ inch diameter, its end with top flush with the surface of the concrete bed and the second a stout iron bolt of 1 inch diameter and 8 inches long built horizontally into the E. masonry wall and projecting about</p>	20-807

		<i>Note:—From this point emanates a branch-line to Standard Bench Mark, Gadra Road.</i>	
49 pp	0.02	Top of concrete monolith (no inscription) of Standard Bench Mark (Minor Type) at Gadra Road railway station. (Primary Mark). It is situated in the extreme NW. corner of compound of railway rest-house at Gadra Road and is 50 feet 5 inches and 85°, 33 feet and 94° and 49 feet and 122° from NE., NW. and SW. corners respectively of the rest-house. It consists of a copper bolt on top of concrete monolith, 1 foot square at base and 3 feet high, the upper 3 inches being dressed to the form of a frustum of a pyramid terminating in a smooth square of about 3-inch side. The monolith rests on a bed of concrete 5 feet square and 3 feet deep, the upper surface of the monolith being 1 foot above ground level. It is surrounded by a masonry wall about 5 feet square (outside), 1 foot thick and 2½ feet high. It includes two supplementary marks one of which is on S. side of the monolith consisting of hard stone prism 8 inches long and 3 inches square, its smooth top flush with the surface of the concrete bed and the second a stout iron bolt 1 inch square and 8 inches long built horizontally into the N. masonry wall and projecting about 2 inches out of it. The inner enclosure is filled in with rubble to a height of about 6 inches above the top surface of the monolith and the rest with earth.	488.361
		<i>Note:—The foundation is in sandy soil and the nearest railway lines are about 72 feet distant.</i>
